The Drain Saver Basket collects debris so it doesn’t clog floor drains.

Water from rear squeegee travels through this hose into the recovery tank.

Airflow is drawn through this hose. Any water from this point will travel to the Yellow Vac Box.

When the tank becomes nearly full a red indicator light in the dashboard turns on.

When the squeegee clogs a red indicator light in the dashboard illuminates.

As the tank fills, the Float Ball rises until it is sucked into a sealed position, cutting off airflow to the vacuum motor and triggering red dash light.

1. If dirty solution bypasses the Vacuum Filter Screen, it will flow into the Yellow Vac Box.
2. The water stays in the Yellow Vac Box chamber due to vacuum pressure and only flows out when the vacuum turns off.
3. After shutting off the vacuum, any dirty water inside the Yellow Vac Box flows out the unloader valve.

1. In the rare case the Yellow Vac Box overfills, water will pass through the motor.
2. Water passing through the Vacuum Motor exhausts in the Blue Reservoir where it will drain down the unloader valve located in the rear of the machine.
3. A clear bowl shows water has passed through the Vacuum Motor. There is an overflow hose so that extra water flows freely out the blue drain hose.
**SERVICE CABINET**

1. **VACUUM DISCHARGE:**
   Water passed through the Vacuum Motor will be visible in the reservoir and excess will flow from the blue hose. Indicates service required.

2. **VAC BOX UNLOADER:**
   Unloader valve for the Yellow Vac Box. Water present in the Yellow Vac Box will drain when vacuum is off.
