To Whom It May Concern,

I wanted to write this letter of endorsement for the people at R.P.S. Corp thanks to the pair of Model 34 sweepers that we use to clean out our Foaling Barns. After a year of use the machines continue to impress us with their ability to clean and an almost complete lack of required maintenance.

We originally purchased the pair of Model 34 walk behind sweepers to replace our traditional methods of sweeping out our Foaling Barn that consistently generated large amounts of airborne dust and fine particulates that are such a problem in the equine industry. Our traditional method of using a back pack blower with rakes and shovels to clean the barns certainly cleaned debris out the door but the dust we pushed into the air soon settled on every crack and crevice inside the building.

The battery powered Model 34 walk behind sweeper eliminated every problem associated with cleaning our Foaling Barns by replacing the need to manually sweep the halls, reducing the noise level while cleaning to a whisper, and most importantly it captures ALL the dust associated with sweeping. In addition to completely capturing the dust in a permanent filter, the Model 34 walk behind sweeper excels at cleaning the dirt out between the bricks that make up the floors of our Foaling Barns.

The salesman told me they were originally made for industrial settings because they are solid steel, but I tend to disagree since they do everything I need done when it comes time to clean the barns daily. I think they were made for the equine industry and they just didn't know it yet.

Regards,

Darrell Courtney
