To Whom It May Concern,

I wanted to take the time to write a brief letter of recommendation for others to use if it helps cement their decision to buy a Tomcat riding cylindrical floor scrubber. We recently purchased a Tomcat XR cylindrical riding scrubber to clean our warehouse and could not be happier with the machines performance months later.

In June of this year we purchased the Tomcat XR cylindrical floor scrubber from a local distributor following a demonstration in our beer distribution facility, something that was necessary since our old riding scrubber was nearing the end of its functional life. A few months later the Tomcat still performs just as well as it did on the demonstration, some of the things we like most about our Tomcat riding scrubber are:

- Heavy down pressure on the scrub brushes makes easy work of cleaning up the tire marks left by our forklifts
- The heavy duty bumper on the back of the scrubber protects the hoses and squeegee, standard equipment on the Tomcat XR riding scrubber
- The tip back tank allows us to completely clean out the dirty water and sludge at the bottom of the tank, this eliminates any foul odors in the recovery tank
- The onboard soap delivery system eliminates mixing chemicals on our own and the safety hazards that could come with it – safety, efficiency, and guaranteed results
- The drain plug stays put and is attached to the top of the tank, no more accidental spills or messy draining incidents

They might seem like small items to some, but every application is different and the Tomcat XR riding floor scrubber has so many features that come standard I am sure everyone will find something different to love about the scrubber. Thanks for such a great machine.

Sincerely,

Dan Mohr – Warehouse Manager
